

7) Install the pole by placing the top of the adjustment tube over the mounting hook assembly. (Note: The hook is designed for discretion only; it will not attach to anything inside the adjustment tube.) (Figure 5)

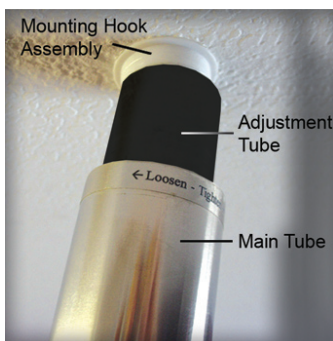

Figure 5

Once the adjustment tube is seated on the ceiling mount push up to compress the pole and position the pole to vertical until the pole base is flat on the floor. Do not drag the base feet as this can cause them to pop off. If using the non-skid floor pad place the pad on the floor under the ceiling mount and place the **EXERCISEPOLE™ BY LIL' MYNX®** on top. (Note: Be sure rubber feet have been installed even if you are using the non-skid floor pad).

TROUBLESHOOTING

Please refer to the frequently asked questions on www.ExercisePole.com for troubleshooting.

Instructions © 2008 Pacific International Marketing & Promotions Inc. Made in USA

8) Now take 2 steps back and look to see if the pole is straight up and down. (Figure 6) Then move 90 degrees and take another look. It is recommended to use a level on 2 sides of the pole to insure that it is straight. Test the stability of the pole by applying successively higher weight before using fully.

Figure 6

9) For "Rotator" pole only

To make the Rotator a spinning pole simply turn the locking screw clockwise until it disengages the rotating assembly. To lock the Rotator into the stationary setting, simply turn the screw counter-clockwise into the locking groove (the machined notch). (Figure 7)

Figure 7

Be sure to check length of the pole each time before use even if the pole has not been taken down.

EXERCISEPOLE™

BY LIL' MYNX®

Installation Manual

EXERCISEPOLE™
is manufactured by Lil' Mynx®
U.S. Patent # 7,338,411

- ✓ Read all instructions before assembly and use of the pole.
- ✓ Keep instructions for future use.
- ✓ Save your box and foam

List of Parts

List of Parts
Main tube
Adjustment tube
Bolted ceiling mount: hook, ceiling mount, lag bolt, drill bit, Allen wrench, rubber feet, screws.

Standard Installation Requirements:

Floor to ceiling minimum distance 95.5 inches/maximum 120 inches
FOR PETITE ONLY: Be advised, due to the difference in diameter the **EXERCISEPOLE™ BY LIL' MYNX®** Petite only comes in 8-9ft or 9-10ft for adjustment, as opposed to the **EXERCISEPOLE™ BY LIL' MYNX®** Original Pole which allows for 8-10ft. All original installation applies to all poles, but please note that the **EXERCISEPOLE™ BY LIL' MYNX®** Petite will only allow for one foot of adjustment

Tools you will need:

Save these important safety instructions.

Safety is a combination of common sense, staying alert, and knowing how your **EXERCISEPOLE™ BY LIL' MYNX®** is installed and used.

WARNING - Read and understand this owner's manual before installing and using the **EXERCISEPOLE™ BY LIL' MYNX®**.

CAUTION - Designed for use on carpeted floors. Use the non-skid floor pad for non-carpeted flooring.

INSTALLATION - Steps 2-3 for bolted ceiling mount only. See step 9 for friction mount installation.

CAUTION: If using this product on a vaulted ceiling you must install a vaulted ceiling mount, not the standard mount.

CAUTION - When installing, be sure to leave enough room to swing around the **EXERCISEPOLE™ BY LIL' MYNX®** without obstruction.

CAUTION - When using the pole, do not grab the adjustment tube. This could cause the pole to detach from the ceiling mount.

1) Drilling into the joist

1) Use a stud finder to find a joist where you would like to install/use the pole. A joist is a wooden beam in your ceiling above the sheet rock that typically run 12-16 inches on center from one another. To use the stud finder, run it along the ceiling until the indicator light turns on. (Figure 1)

Figure 1

DANGER - Failure to secure your bolted ceiling mount into a ceiling joist will compromise the structural integrity of your pole, which could result in serious injury. Consult a locally certified housing repairman for installation help if necessary.

WARNING - You must find a joist for mount or serious damage will occur.

WARNING - Always use safety glasses when installing your ceiling mount.

NOTE: Make sure when you drill that saw dust is ejected from the hole. This helps to confirm that you're drilling into a joist.

2) After locating the joist, drill a hole with the 3/16 bit supplied into it. Drill all the way in until the drill bit disappears completely - about 2 1/2 inches.

3a) Standard Mount

Place the lag bolt through the plastic mount. Mount as shown. Use the Allen wrench to tighten the bolt into the drilled hole. It is important to use appropriate force to secure the bolt. Be careful not to over tighten as you will "strip" the threads in the wood. (Figure 2)

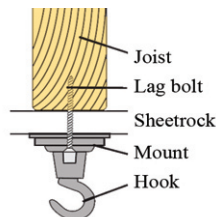

Figure 2

3b) Vaulted Mount

• Place the lag bolt through the mount base and tighten into the drilled hole. Once you are close to tight be sure to index the mount to insure that the main mount slot is lined up with the vault of the ceiling. (The slot should be lined up from the short to tall direction of the ceiling. This will allow the main mount to swing into position to hold the pole). Once the slot is lined up, tighten the lag bolt.

NOTE: For vaulted ceilings, drill at the same angle as the vault.

• Once the lag bolt is tightened, place the swing mount in and place the 1/4x20 bolt through the mount. Allow the mount to swing into vertical position. It is important that it is vertical as this is what the pole relies on to hold it in place. Once vertical, tighten the bolt with the tool supplied. (Figure 3)

After the pole is installed in place re-check the tightness of the bolt. If it is not tight the mount may move causing the pole to fall.

Figure 3

4) Install the rubber feet on the base by inserting the machine screw through the rubber foot and thread into base. Tighten with a screwdriver. (Figure 4)

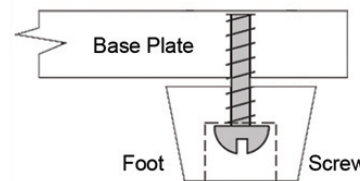

Figure 4

CARE

The **EXERCISEPOLE™ BY LIL' MYNX®** comes with a stainless steel finish and it is important to treat your dance pole with care when in use and in storage. Clean with a damp cloth or Windex. **BE CAREFUL NOT TO DAMAGE OR SCRATCH THE SURFACE.** It is recommended that you remove any rings or bracelets before use, as these items can scratch the finish. **IT IS ALSO**

- SUGGESTED THAT THE EXERCISE POLE™ BY LIL' MYNX® BE STORED HORIZONTALLY** to insure that it has no chance of falling over, causing injury to any person or damaging the finish.
- Your pole should never be more than 1 to 1 1/4 inches taller than the room
 - Do not jam pole into place. This could cause internal damage voiding all warranty.
 - Do not allow

5) Measure the ceiling height.

6) Adjust the pole length by turning the adjustment tube while applying slight pressure towards the foot of the pole. (Holding the **EXERCISEPOLE™ BY LIL' MYNX®** at a 45 degree angle is enough pressure.) Do not pull out on the adjustment tube as you extend it. You will be tempted to pull and twist, but resist the temptation. Turn it counter-clockwise to make it taller, clockwise to make it shorter. Adjust the pole so that it is 1 inch longer than the height of the ceiling. (i.e. if you have an 8 foot ceiling, the pole should be 8 feet 1 inch.) Measure from the bottom of the base to the top of the adjustment tube (If installing on non-carpeted floor be sure to account for the 1/2 inch height of the non-skid rubber pad). Check tension every time you install the **EXERCISEPOLE™ BY LIL' MYNX®**

(continues on back)

- children to play on or use the pole.
- Do not overload the pole. Overloading the pole can result in serious injury. Your **EXERCISEPOLE™ BY LIL' MYNX®** is designed to handle dancers up to 200 lbs.
 - Do not install near windows or doors with windows.
 - Do not install near open balconies or unprotected heights.
 - A radius around the pole equal to the height of the

- dancer should remain clear and free of all furniture, objects, obstructions, or debris.
- Do not use if the pole is damaged in any way including, but not limited to, bends, kinks, or any other deformation of the pole.
 - Regularly inspect the base feet for wear, damage, or looseness.
 - Regularly inspect the ceiling mount for wear, damage, or looseness.
